A054 - Migration pilot preflight

BLOCKED | No scientific execution

UTC: 2026-10-26T17:08:00.072377+00:00

Source: A054-v0.5.1; proposed sibling: A054-v0.6.0

The proposed sibling has NOT been created. Existing versions and results were not modified.

Architecture and adapter

E013 / E011 provider-dependent state selection

Require E013-COMMON-CARRIER-MANIFEST-1 and E011 provider anchors; preserve stage 30 and deduplicate enabled versions.

Independent gates

Migration: BLOCKED. Execution: NOT_RUN. Scientific certification: NOT_RUN.

Blocking conditions

PER FAMILY ADAPTER NOT IMPLEMENTED

DATASET ADMISSION AND PAYLOAD HASH AUDIT REQUIRED

FRAMEWORK MANIFEST MISMATCH

REGISTRY RECONCILIATION REQUIRED

Framework manifest mismatch: docs/DD32_FP32X2.md

Dataset evidence

Active view: 42 topologies. Historical statuses: {'FAIL': 36, 'PASS': 6}. Source-index hashes: PASS.

Selection is not science requalification. Geometry payload hashes and per-falsifier physical admissibility remain unverified. E010 v0.3.5 physical dynamics: NOT_RUN.

Evidence and next action

Run: 20261026T170800Z-2bf495e6

Result SHA-256: 4407621225a9647f7c85243b08f04e4cec0c760706a0ced08cc4ff011152468c

Resolve canonical source drift without rewriting manifests to hide differences; reconcile registry; review the per-family adapter and dataset admission contract before creating a new version.
