A065-v0.4.3 | Independent voxel audit

Evidence category: independently recomputed numerical diagnostics from saved rounded FP32/FP64 voxels. Source-native PKLSA/Casimir/gravity and physical pressure closure remain UNRESOLVED.

New independent gates G49-G54

Gate	Verdict	Interpretation
G49	NOT_RUN_PREREQUISITE	MISSING_DPNP_DPCTL: install compatible Intel dpnp and dpctl into active venv
G50	NOT_RUN_PREREQUISITE	MISSING_DPNP_DPCTL: install compatible Intel dpnp and dpctl into active venv
G51	NOT_RUN_PREREQUISITE	MISSING_DPNP_DPCTL: install compatible Intel dpnp and dpctl into active venv
G52	NOT_RUN_PREREQUISITE	MISSING_DPNP_DPCTL: install compatible Intel dpnp and dpctl into active venv
G53	NOT_RUN_PREREQUISITE	MISSING_DPNP_DPCTL: install compatible Intel dpnp and dpctl into active venv
G54	UNRESOLVED	No independent physical PKLSA source

Scientific boundary

All numerical pressure fields are calculated from the same velocity data. Passing Poisson, energy, curl, or GPU parity gates does not independently validate physical vortex core profile, microscopic dynamics, a Casimir interaction, or gravity. Failed historical gates are immutable.
